\$10 MILLION FOR RESEARCH INTO LOW EMISSION COAL TECHNOLOGIES

Minister for Industry, Resources and Energy, Anthony Roberts, today announced a new round of research funding through the Coal Innovation NSW Fund.

Mr Roberts said \$10 million is available with a cap of up to \$2 million for individual projects.

“This is an important research initiative to encourage academics, researchers and industry to develop world leading projects that look to develop innovative methods for low emission coal technologies,” Mr Roberts said.

“Projects must be designed for NSW coal or coal fired power stations and aim to reduce greenhouse emissions or increase combustion efficiency.”

Projects considered will provide research, development and a demonstration of low emissions coal technologies or increase awareness around the need for low emissions coal technologies.

“I encourage everyone with the skills and expertise to deliver a project in this field to apply for funding through the Coal Innovation NSW Fund,” Mr Roberts said.

Program Administration Guidelines are available at: www.tenders.nsw.gov.au

Applications close 12 October 2015.
