Weekly incident summary

8 June 2016

Note: While the majority of incidents are reported and recorded within a week of the event, some are notified outside this time period. The incidents in this report therefore have not necessarily occurred in a one week period. All newly recorded incidents, whatever the incident date, are reviewed by the Chief Inspector and senior staff each week and summarised in this report. For more comprehensive statistical data refer to our Annual Performance Measures Reports.

<tr>
<td>2</td>
<td>Unplanned Movement</td>
<td>Unintended movement of truck. A hire truck rolled approximately 500mm in a surface wash bay area. The operator was half in, and half out, of the cab when he realised that he had not properly engaged the park brake. The park brake on the hire truck differed to those of the permanent site trucks. Furthermore the hire truck did not have the brake alarm fitted to site trucks.</td>
<td>Although the truck operator had been made aware of the difference in park brake activation between the hire truck and site truck, he has been habituated in the use of the standard site truck. Mine operators must consider human factors when identifying risks. Generic pre-starts and contractual specification of the hire truck did not mandate a park brake alarm as per site standard. Mine operators should ensure that standards are maintained and new equipment is subject to a stringent pre-use audit against site requirements.</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>2</td>
<td>Collision</td>
<td>A blasthole drill was being trammed to a location suitable for the drill to be refuelled away from drilled holes. After travelling 30 metres the drill collided with a parked light vehicle, pushing the vehicle 3 metres before being alerted to stop by another drill operator. The driller was focussed on avoiding drill holes while trampling the drill. The light vehicle had been parked there earlier in the shift by the same operator</td>
<td>Mines should review vehicle parking arrangements for all relevant areas of the operation. The parking arrangements should allow for safe movement of operational vehicles clear of those that are parked-up.</td>
</tr>
