ACCESS MANAGEMENT PLAN FOR

PROPERTY NAME: "WEE WARRA"

BLOCK/S: 200, 201, 202, 203, 204, 205

LOCATED IN OPAL PROSPECTING AREA 4

This Access Management Plan is made under sections 236E, ~~236F~~, ~~236G~~ or ~~236H~~ of the *Mining Act 1992*.

Failure to comply fully with the terms and requirements of this Access Management Plan may provide grounds for cancellation of the relevant licence or claim granted by the Department of Primary Industries and/or imposition of penalties as specified under mining legislation.

LOCATION

This Access Management Plan covers the area shown on the attached plan.

REVIEW OF ACCESS MANAGEMENT PLAN

A review of this plan may be sought at any time by either the Landholder or Miners Representative. Any review to this Access Management Plan, other than an agreed temporary amendment, should be in writing and lodged with the Director-General as an addendum to this Access Management Plan. The next review will occur when a substantial number of mineral claims are registered. At this point the major access roads and the level of maintenance required will be determined.

TITLE CONDITIONS

Conditions set out in the Opal Prospecting Licence or Mineral Claim may not be amended by agreement between the licence/claim holder and the landholder. (Copy of current conditions attached).

ACCESS

Access to claims will be via the roads and tracks nominated on the plan unless agreed in writing with the Landholder.

Keep all gates closed on all access roads at all times.

Black soil roads and tracks should not be used during or following wet weather while they are still soft.

Do not impede roads or tracks with mining equipment or mullock.

Only designated roads should be used for access to opal fields. Where routes are marked "No Access" there is to be no mining related traffic on these roads. If roads are not marked on the map then they cannot be used for mining purposes.

Keep your driving speed around the fields to a safe, acceptable level. Excess speed puts stock, landholders and other miners at unnecessary risk.

MULLOCK

Any excess mullock beyond that required for the backfilling of mine shafts must be transferred to a mullock dump (refer to the attached plan for the location of mullock dumps).

Opal bearing clay stockpiled for processing must be removed at regular intervals.

Ensure that mullock is only dumped inside the boundaries of the dump and progressively fill it in one direction.

Mullock may not be dumped at any location other than an approved mullock dump.

AREA AND METHOD OF ACTIVITY

Mining and prospecting may only be carried out in the area stipulated in the subject licence or claim, and outside areas of dwellings, gardens and improvements and other identified restricted areas as shown on the plan.

FENCES: Claims can be pegged up to or over a fence providing there is no surface activity within 10m of all fences within the property.

ROADS: Claims can be pegged over roads provided there is no surface activity within 10m of the centre line of the road.

DRAINS: Claims can be pegged over drains provided there is no surface activity within 10m of the uphill side of all drains designated as drains by the Department of Natural Resources.

Do not block off natural drainage channels running across your claim as it interferes with water flow into stock dams

Permanent camps are prohibited. Only tents and caravans are permissible.

No dogs are permitted.

~~ACCESS TO WATER~~

~~Access to water is shown on the Plan.~~

~~Complete as applicable~~

agreed that this should be deleted between Landholders + LRMA

~~AMP agreed in accordance with Section 236E of the Mining Act 1992~~

~~Signature of Landholder:~~

~~Signature of Miner's Representatives~~

~~Print Name: DRAGO PANICH~~

~~*Daniel*~~

~~Print Name: DANIEL HATCHER~~

7-2-06

~~Access Management Plan determined under Section 236F of the Mining Act 1992.~~

~~Determined:~~

~~By delegation from the Director General,
Department of Primary Industries~~

~~Access Management Plan determined under Section 236G, or 236H of the Mining Act 1992.~~

~~Determined:~~

~~Mining Warden~~

OPAL PROSPECTING BLOCKS 200 - 205 ACCESS MANAGEMENT DIAGRAM

PROSPECTING BUFFER ZONES

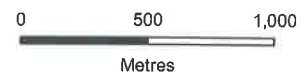

FEATURE	BUFFER ZONE
Homestead	500 metres
Woolshed	200 metres
Fences	50 metres
Dams	50 metres
Constructed Drains	50 metres
Sheds	50 metres

Landholder.....

Miners' Representative.....

Legend	
	Opal Prospecting Blocks
	Dams
	Cadastral Parcels
	Surveyed Fence
	Constructed Drain
	Natural Drain
	Tracks
	Box Swamp

Note: features shown on this map may not be exhaustive.

NOTE: - There are no allocated watering points within Opal Prospecting Blocks OPB 200 to OPB 205. The nearest water access point is Sheeppards dam.
