

Solar power generators

File Geodatabase Feature Class

Tags

NSW, renewable energy, infrastructure, generators, points

Summary

The feature class shows the location of, and contains information about, operational renewable energy generators and facilities in New South Wales for solar energies.

Description

This dataset contains information about operational solar electricity generation facilities. Attributes include the location, name and owner of facility, type of renewable energy, technology, installed capacity (in MW), and year the facility was commissioned.

The Geological Survey of New South Wales developed the Renewable Energy Infrastructure database in 2016 for the Renewable Energy Mapping Project, as part of the NSW Renewable Energy Action Plan. The aim of the Renewable Energy Infrastructure database is to identify renewable energy generators and infrastructure in New South Wales and display them as spatially located point data.

LINEAGE STATEMENT

A single, internally consistent database of renewable energy electricity generators and biofuel generators was compiled from the following government sources:

1. Land Use Utilities database - Land Use Assessment, Geological Survey of NSW
2. Department of Planning and Environment projects database (<http://majorprojects.planning.nsw.gov.au/>)
3. AREMI - map-based access to Australian spatial data relevant to the Renewable Energy industry <https://www.nationalmap.gov.au/renewables>
4. Australian Energy Resource Assessment - Geoscience Australia, updated October 2015 (<https://data.gov.au/dataset/ds-ga-a05f7892-efe9-7506-e044-00144fdd4fa6/details?q=energy%20resource%20assessment>)
5. National Power Stations database - Geoscience Australia, updated 2015 (<https://data.gov.au/dataset/ds-ga-04661f51-82ee-144e-e054-00144fdd4fa6/details?q=national%20power%20station%20database>)
6. NSW Resources and Geoscience website (<http://www.resourcesandgeoscience.nsw.gov.au/investors/renewable-energy>)
7. NSW Office of Environment and Heritage (environment.nsw.gov.au)
8. NSW National Parks and Wildlife Service (nationalparks.nsw.gov.au)
9. National Electricity Market Registration and Exemption List - Australian Energy Market Operators, (<http://www.aemo.com.au/Electricity/National-Electricity-Market-NEM/Participant-information/Current-participants/Current-registration-and-exemption-lists>)
10. GreenPower Generators database (<https://www.greenpower.gov.au/About-Us/Where-Are-GreenPower-Generators/>)
11. Generator database owned and maintained by NSW Department of Planning and Environment, Division of Energy, Water & Portfolio Strategy.
12. Australian Energy Storage Database (<https://energystoragealliance.com.au/energy-storage-database/>)
13. Australian Government Clean Energy Regulator (<https://www.rec-registry.gov.au/rec-registry/app/public/power-station-register>)
14. NSW Government Planning Panels (<http://www.planningpanels.nsw.gov.au>)
15. NSW Government Spatial Services (<http://maps.six.nsw.gov.au/>)
16. Carrathool Shire Council (<http://www.carrathool.nsw.gov.au>)

Where available, maximum capacity values (in MW) provided by the NEM Registration and Exemption List were used as the primary source of capacity information for the map. If the facility was not registered with NEM at the time of data collection, the most recent

company data was used as a source of capacity information.

In the NEM Registration and Exemption List, combined registered and maximum capacities were provided for (a) Tumut 1 and 2, and (b) Kangaroo Valley and Bendeela. The registered capacity of the separate facilities was calculated by multiplying the amount of generator units at each facility by unit size. The maximum capacity was calculated from the percentage of combined capacity that each facility accounts for (as determined in the registered capacity calculation).

For example:

Tumut 1 and 2 combined - reg capacity = 616 MW, max capacity = 665 MW. Tumut 1 - 1-4 units, 82 MW unit size. Tumut 2 - 5-8 units, 72 MW unit size
Registered capacity for Tumut 1 = 4 units x 82 MW = 328 MW
Registered capacity for Tumut 2 = 4 units x 72 MW = 288 MW
Maximum capacity for Tumut 1 = $[(328/616) \times 100 = 53\%]$ = $0.53 \times 665 = 352.45$ MW
Maximum capacity for Tumut 2 = $[(288/616) \times 100 = 47\%]$ = $0.47 \times 665 = 312.55$ MW

Data authors also used Google Earth and private company or third party websites to verify the location of facilities and ensure the best available and most up-to-date data was used.

Note: This dataset has been reviewed as part of the NSW Renewable Energy Mapping Project update (version 1.3, November 2018).

The following updates have been applied:

Solar Power Generators

- 100kW minimum generator size applied to the dataset

- Additional 89 new solar generators included in the dataset

Wind Power Generators

- Additional 3 new wind generators included in the dataset and generator capacities updated

Hydro Power Generators

- One additional hydro electricity generator added

The data is now current as of November 2018.
